MEMORANDUM

Subject: NPL Management Review  
ALCOA, Wenatchee, (EPA ID No. WAD009270794)

From: Debbie Flood, Chief *DFlood*  
Site Evaluation Section

To: Jim Everts, Chief  
Superfund Response & Investigations Branch

The purpose of this memorandum is to document the Region 10 Management Review of the above site. On June 23, 1993 the following members of the Regional Decision Team (RDT) met to discuss this site:

James Everts - SRIB Chief  
Kathy Davidson - PMB Chief  
Pat Cirone - ESD, Associate Director  
Carol Rushin - SRB Chief  
Ed Kowalski - ORC Chief

Also in attendance were Judi Schwarz, Monica Rolluda, David Bennett, Debbie Robinson, Debbie Flood and Greg Thomas. The site presentation was made by Debbie Robinson.

For the following reasons the site was unanimously voted a low priority by the RDT:

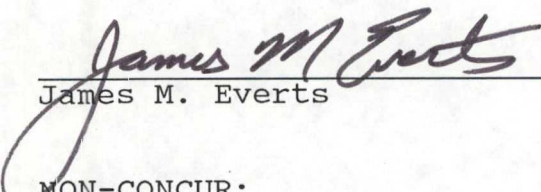

- \* Contaminants in ground water are below health-based levels.
- \* There are no other known environmental impacts from the site.
- \* The Washington Department of Ecology inspects the site several times a year, and is following the investigation of the site.

The RDT agreed that EPA should determine whether the on-site workers have been notified that they may be drinking water that contains cyanide, even below health-based levels. If not, the RDT recommends that the State notify the workers that there is cyanide in the drinking water.

If designated a low priority, the site will be re-examined in one year to determine if the priority should be changed. If you agree with the above, please indicate your concurrence below. If you do not concur, please elaborate as to the reasons for non-concurrence.
